# 1 C2B payment

# 1.1 Outgoing Payments service

Aktia's Outgoing Payments service enables material-format payment based on an international message standard. The use of the service requires that the payer make an Outgoing Payments service agreement with Aktia. The agreement defines, among other things, the service ID, the allowed debit accounts and the senders of the material. The service always covers the sending of SEPA payments, foreign payments and domestic express payments. The sending of outgoing payment orders (Request for Transfer, MT101) is only allowed if it has been separately defined as allowed by agreement. In addition to the Outgoing Payments agreement, the use of the service requires that the sender of the material has made an agreement on the sending channel. Outgoing payment materials are received in the Web Services channel and in the materials transfer facility of the Corporate netbank<del>.</del> The feedback formed by the bank is set to be retrieved in the channel from which the payment material was sent.

#### 1.1.1 Concepts

Term	Description
	Customer-to-bank. The general name for a service where the customer sends material for processing by the bank. Typically the term refers to pain.001 payment material.
Service ID	The payer ID defined by the Outgoing Payments agreement, which specifies the payer and the service agreement, within the scope of which the material is sent. Mandatory information for the payment material. Given in the element Dbtr/Id/OrgId/Othr/Id.

Aktia Bank plc • Arkadiankatu 4-6 • 00100 Helsinki Tel. +358 10 247 6700 • Business ID 2181702-8 • www.aktia.fi

D la (a	The start later and the discussion of the last term of the			
Due date	The start date announced by the payer to the bank for the execution			
	of the payment order. The day on which the payer wishes that their			
	account is to be debited. If the due date is not a banking day, the			
	execution of the assignment is started on the banking day following			
	the due date. Take-into account the payment type-specific restrictions			
	for the due date!			
Payment order	Each Credit Transfer Transaction Information part of the message			
	forms one payment order.			
Payment message, message,	One unit formed of the Group Header, Payment Information and			
payment material	Credit Transfer Transaction Information elements.			
Payment batch	One PaymentInformation part.			
Balance circulation	A period of time during which the debit of a payment batch or an			
	individual transaction is tried again, if the debit has failed due to			
	insufficient funds.			
Sending channel, channel	The manner in which the payment material is sent to the bank and			
	the feedback material formed by the bank is retrieved. The possible			
	sending channels of the Outgoing Payments material are Aktia's			
	Corporate netbank material-transfer and the Web Services			
	connection. The sender of the material has to have a valid channel			
	agreement.			
XML	Extensible Markup Language. The Markup Language in which			
	the payment materials are formed.			
The XML schema	Describes the allowed structure of the material. The structural			
	correctness of payment messages is checked in the bank against the			
	message type schematic.			
Recurring payment	An established term, which refers to salaries, pensions and other			
	payments that are typically paid during a certain period a number			
	of times to the same recipient. SEPA recurring payments are			
	identified by the Category Purpose code value SALA given at			
	batch level. The due date given in the material is the debit date			
	of the payer's account. The funds are credited to the account of a			
	payee in a Finnish financial institution on the next banking day,			
	regardless of the financial institution where the payees			
	have their accounts.			

# Payment parties

Debtor	Payer, account holder	The party from whose account the payment is debited	
Ultimate Debtor	The original payer, recipient of the invoice, debited party	The party who has purchased goods or a service and to whom the seller has delivered the invoice. The Ultimate Debtor information is used when the recipient of the invoice is a different party than the payer.	
Debtor Agent	Payer's bank	Payer's account bank, i.e.the debit account's account keeper bank.	
Initiating Party		The party who forms the payment material. May be the payer, an agency or the company's own service centre.	
Creditor	The payee	The party to whose account the payment is paid or to whom the cheque is delivered.	
Ultimate Creditor	The final beneficiary	The party who is the final beneficiary of the payment. For example, the payment is made to the financial institution's account, but the final beneficiary of the payment is the customer of the financial institution	

Creditor Agent	The payee's bank	The payee's account bank, i.e. the credit- account's account keeper bank.
		account's account keeper bank.

#### 1.1.2 Payment messages

The payment messages comply with the international ISO20022 payment message standard. The descriptions of the messages and the XML schema specifications are available on the website www.iso20022.org. The same website also contains an external code list of payments (Payments External Code List), where the values according to the standard are found for the code fields of the payment messages. The messages to be sent must be according to the standard. The Federation of Finnish Financial Services (FK) has published the banks' common ISO20022 payments guide, where the message elements used in SEPA payments and the information content given in them have been described. In addition to the standards and the common instructions, Aktia's instructions on the information content of the messages must be complied with. The bank has the right to reject messages sent with deficient or incorrect information. If the message provides information content that is not included in the instructions of the payment type in question, the additional information is left unprocessed. The service descriptions may change.

#### **1.1.3** Payment message from the customer to the bank

The message description of a payment message sent to the bank is "CustomerCreditTransferInitiationV03" and the XML schema's ID is "pain.001.001.03". The word message refers to one XML schema occurrence, i.e. a unit formed of the Group Header, Payment Information and Credit Transfer Transaction Information sections.

#### **1.1.4** Feedback message from the bank to the customer

The message description of the feedback message formed by the bank is "Payment StatusReportV03", and the ID of the XML schema is "pain.002.001.03". Feedback messages are formed in different phases of the process, and they report the result of the processing of the material. The customer shall always retrieve and check the feedback. The feedback message contains references to the original payment material and in some cases to the individual transactions contained in it.

Feedback is formed of incorrect batches and transactions after each processing. The feedback contains information on the batches and transactions rejected in the processing in question. The feedback is formed of each rejected transaction and batch only once.

The transactions whose processing is unfinished and the status code of the transaction is PDNG, the feedback of the payment is formed after each processing, if the transactions cannot be successfully processed.

#### 1.1.5 Structure of the payment message

The payment message is preceded by the root element of the entire message <Document>. The root element must have at least one xsi:schemaLocation attribute indicating the schema used and its version. The structure of the actual payment message is three-level:

#### 1.1.5.1 Group Header (A part)

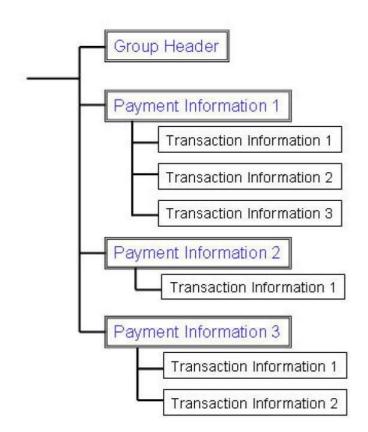

The Group Header part occurs in the payment message only once and it contains the ID information of the payment message. One Group Header may contain one or several Payment Information parts, i.e. payment batches, each of which may contain one or several payments.

#### 1.1.5.2 Payment Information (B part)

There may be one or several Payment Information parts, i.e. payment batches, in the message. A Payment Information part contains the information elements concerning the debit, such as the debit account, the due date and the service ID. The information is the same for all payments included in the batch. At the batch level is also given any payment type specifying information. If there is a need to send payments whose debit information is not the same in the same material, separate batches must be formed of the payments.

#### 1.1.5.3 Credit Transfer Transaction Information (C part)

The Credit Transfer Transaction Information, i.e. the transaction level, includes the information elements related to the credit of an individual payment. One Payment Information part may include one or several Credit Transfer Transaction Information parts.

Source: Unifi ISO20022 Message Definition Report

The maximum size of the material is 30 megabytes.

The largest allowed transaction number of a payment batch is 10,000 transactions. Material, which includes a larger batch or batches than allowed, is rejected in channel checks.

More detailed information on the information content of the material by payment type is described in chapter 3.

#### 1.1.6 Character set and formatting

In the Outgoing Payments material, the encoding must be UTF-8. The Byte Order Mark (BOM) presentation format may not be used.

The Scandinavian alphabet and separately specified and permitted special characters are transmitted on SEPA payments to Finnish banks. At least the Basic Latin characterisation (a b c d e f g h i j k l m n o p q r s t u v w x y z A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9 / -? : ()., ' + Space) is forwarded to other banks and in foreign payments. : ()., ' + Space). If there is a character in the information on the payment, which cannot be transmitted to the recipient bank as such, the bank is entitled to reject the payment or replace the character by an allowed character (e.g. a question mark). No characters other than those included in the Basic Latin character set will be used in the ID information; this avoids the conversion of the ID information character set, and the ID of the payment is transmitted unchanged in all phases of the process.

If there are so-called control characters in the material, e.g. a tabulator, it is always rejected in the channel check. For the formatting of the material, a blank must be used instead of a tabulator. Certain special characters are replaced according to the XML standard. The following special characters must be announced as entities:

Chara	Entity
cter	
&	&
<	<
>	>
11	"
1	'

Other characters may not be announced as entities.

# 2 Sending and retrieval of messages

#### 2.1 Phases of the process

#### 2.1.1 Channel check

- 1) The customer sends the payment material.
- 2) The bank identifies the sender, checks the sender's authority to send the material type in question, checks the structural correctness of the material, and makes high-level agreement and date checks. As a result of these checks, the material is either accepted as a whole for continued processing, or rejected entirely.
- 3) The bank recognises the transmission, informing whether it succeeded or failed. In the Web Services connection, the acknowledgement of transmission is the Application Response of UploadFile message. In the material transfer of Corporate netbank, the acknowledgement of transmission is displayed in the user interface.
- 4) The bank forms feedback material that shows whether the payment material was accepted for continued processing or rejected. If the material is rejected, the feedback reports the reason for rejection. No feedback message is formed, if the transfer fails or if the payment material cannot be processed at all. In these cases, the notice of rejection is only given by the transmission recognition message.
- 5) The customer retrieves the feedback.

#### 2.1.2 Reception checks

- Materials that have passed the channel check are transmitted to continued processing, where the bank checks the eligibility of the transactions for execution. The correctness of the material is checked at batch and transaction level. Batches and/or transactions that do not pass the check are rejected.
- 2) The bank forms feedback material that shows the result of the reception check. One set of feedback material is formed for each payment material. The feedback is always formed. The payment material may be either
  - a. Entirely accepted (Group status ACCP)
  - b. Entirely rejected (Group status RJCT)
  - c. Partly accepted (Group status PART)

The feedback reports the ID information of the rejected batches and/or transactions and the rejection reason and explanation.

3) The customer retrieves the feedback. The customer must form and send new, corrected assignments of the rejected transactions.

#### 2.1.2.1 Duplicate check

In addition to the other checks, a duplicate check of batches is made in the reception checks. It prevents the processing of payment material sent as a duplicate. The check is performed on a batch-specific basis. The batch can be interpreted as a duplicate, if the identifier (Msgld), the batch identifier (PmtInfld), the batch's service ID and the total amount of the payments in the batch are all the same as in another batch sent within the last 3 months. The check for duplicates also applies to the batches included in the same payment message. A batch interpreted as a duplicate is rejected, and the rejection is reported in the reception feedback. If a previously sent payment batch is rejected, a batch sent with the same information does not remain in the duplicate check. To prevent groundless rejections, the IDs of payment messages must be unique for at least 3 months. If material is to be sent again, the ID information must be changed.

#### 2.1.3 Payment

Batches that have partly or entirely passed the reception check and the accepted transactions included in them are transmitted to payment processing. The batches are selected for payment according to the due date. Batches whose due date is the current date will be paid in the next possible payment after the material reception check has been performed. Batches whose due date is in the future will remain to wait for the due date, and they will be processed in the first payment processing of the due date. Batches whose due date is not a banking day will be paid on the next banking day. The due date of salary materials (SEPA batches where Category Purpose SALA is given at the batch level) must be a banking day, or the batch will be rejected in the reception check. The due date of domestic express payments must be the current date, and express payment batches may only be sent on banking days.

In the payment phase, the information on the batches and transactions are checked again. In addition, the balance of the debit account is checked. The customer must ensure that the debit account has balance corresponding to the payment material on the due date. The balance must be on the account before the payment processing is started. The execution of payments debited from the account cannot be guaranteed, if balance is transferred to the debit account only in the same payment processing. The recording order of payments is random, and if debit is attempted before the credit has been recorded on the account, the debit will be uncovered.

The balance of SEPA payments is checked debit batch-specifically. If the balance of the account is not sufficient for charging the total amount, the entire batch remains uncovered. The balance of other transaction types is checked transaction-specifically. If there are payment transactions processed as both SEPA payments and foreign payments in the same batch, one debit batch is formed of the SEPA payments, and the foreign payments are debited as individual transactions.

At the payment stage, the transactions are prioritised by payment type and debited in priority order. The priority of an individual payment is based on payment type specified at the batch level, in other words, if, for example, a SEPA batch includes a payment processed as a foreign payment, its priority is the same as with SEPA payments. The mutual debit order of same priority payments is random.

Payment type priority:

- 1. Domestic express payments (POPS-payments)
- 2. SEPA payments (including recurring payments)
- 3. Foreign payments and foreign express payments

Uncovered transactions are attempted to be debited in every payment processing on the due date. If the balance of the account is not sufficient even in the last payment, uncovered transactions are rejected. The exception is domestic express payments which are tried to be debited only once. If the balance is not sufficient in the first payment, uncovered payments are rejected at once.

Payment feedback is formed only in the case that all transactions cannot be charged successfully. The feedback only takes into account the transactions that have been processed in the payment in question. Batches whose due date is in the future, and/or potentially already previously rejected batches/transactions are not reported. The payment feedback reports rejected batches and transactions, and batches and transactions that are in the Pending state, i.e. have remained in balance circulation or manual processing. Feedback is formed of batches and transactions in the Pending state after each charging attempt.

#### 2.1.4 Outgoing Payments – material application IDs

Material type	Application ID
Outgoing Payments – Payment material	XL
Outgoing Payments – Feedback material	XP
Outgoing Payments – Express payment material	XF

We recommend that express payments are sent as separate material with their own application ID. Express payments may, however, also be sent among other payment material; however, always as their own Payment Information part. Additional instructions are available in chapter 5.1.3.

Sending material in the Web Services service is described in a separate description WSServiceDescriptionAktiaSpPop.pdf (samlink.fi)

#### 2.1.5 Processing schedules

Materials may be sent to the bank on all weekdays, round the clock. Channel checks are performed and the channel feedback is formed immediately in connection with the reception of the material. Reception checks are performed and the reception feedback is formed during processing periods about half an hour from the time when the bank received the material. The payment processing is performed on banking days according to a separate schedule. The processing times are indicative, and the bank has the right to change the schedules. In the processing of outgoing payments, the cut-off times according to each payment type are complied with. The processing schedules are available on Aktia's website.

#### 2.1.6 Feedback formation

- 1) Channel feedback: Formed immediately in connection with reception and is retrievable at the latest within a few minutes of the sending of the material. The feedback is formed always, if it was possible to read the material. Feedback is not formed, if the sending fails, or if the material is incorrect and it cannot be processed at all. In these cases, the information on the failed transmission is given in a recognition message on the Web Services channel, and in the materials transfer of the Corporate netbank, the customer is shown an error message in the user interface.
- 2) Reception feedback: Is formed immediately after reception checks, and is retrievable within about half an hour.
- Payment feedback. Is always formed immediately after each payment processing has completed of those transactions of the due date in question which could not be charged successfully.

#### 2.1.7 Cancellation of the payment material sent

It is possible for the customer to ask the bank to cancel the payment batches whose due date is in the future. The request must be made to Aktia's corporate customer service at the latest on the banking day preceding the due date two hours before the corporate customer service closes. If the cancellation request is made later than this, or it concerns the batch of the current date, the bank is not able to guarantee the processing of the cancellation. In the cancellation request, each payment batch that is to be cancelled must be specified. Precise instructions for making the cancellation request is available from Aktia's corporate customer service. The bank may charge a fee for the cancellation in accordance with the price list.

Cancelling payment material with a material-format removal request message is not possible for the present.

# 3 Pain.001 payment messages: structure and content by payment type

Index	Element	Mandatory	Number	Example content	Explanation
Reference to a ISO20022- compliant - element number	Element name according to the schema. The characters /- preceding the name tell how deep in the XML structure the element is. Elements marked with grey are upper-level elements, for which information content is not directly given.	According to the schema voluntary, but when ordered by the bank mandatory.	<ul> <li>11 Mandatory, may occur only once.</li> <li>1n Mandatory, may occur several times. 01 Optional, may only occur once.</li> <li>0n Optional, may occur several times.</li> </ul>	Includes an example of information set in a field.	Additional information or instructions

Reading instructions for the tables:

It is possible to provide additional information with Pain.001 payment messages, which facilitate the allocation of payments and the identification of the payment parties. Aktia transmits the information to the payee's bank according to the description of each payment type. Whether the information arrives depends on the payee's bank, so it cannot be guaranteed that all the information transmitted on the payment reaches the payee.

# 3.1 SEPA payment

It is possible to pay euro-denominated payments to the SEPA area as SEPA payments. The payment batch is defined as SEPA payments by the Service Level value SEPA that is given in the Payment Information part.

The balance check of SEPA batches and debit is performed batch-specifically. If the payer's account balance is not sufficient for the charging of the entire batch, the batch remains uncovered in its entirety.

If the SEPA batch includes euro-denominated payments transmitted as foreign payments, they are processed according to the processing rules of foreign payments and debited as individual debits separate from SEPA payments.

Euro-denominated payments to SEPA banks are primarily transmitted as SEPA payments, unless the batch has been specified as domestic express payments or foreign express orders. In SEPA payments, the expense code SLEV or SHAR must always be used. If the payment type has not been specified at batch level, and the bank guides the payment as a SEPA payment, the other expense code given in the payment is not taken into account. If the batch is specified as SEPA payments at batch level (Service Level SEPA), only the expense code SLEV or SHAR is allowed. SEPA batches sent with other expense codes are rejected. The currency of the payments included in the SEPA batch must be EUR. Payments in other currencies are rejected.

SEPA payments, whose payee's account is with Aktia, are recorded to the payee's account immediately when the payment processing has completed. SEPA payments transmitted to other banks are transmitted according to the general terms of payment processing and Aktia's processing and cut-off schedules.

**3.1.1 SEPA credit transfer additional services (Additional Optional Services)** Banks operating in Finland have defined the additional services referred to below for SEPA credit transfer. The information according to the additional services is only transmitted between the banks included in the service in question.

#### 3.1.1.1 Payment date (AOS1 Acceptance Date)

Finnish banks transmit with the payment transaction the payment date, i.e. the debit date of the payer's account. The information is also transmitted to the payee.

#### 3.1.1.2 Extended Remittance Information ERI invoice itemisations

The supplementary ERI service enables the transmission of details of a number of invoices and credit notes with one account transfer. The information on the invoices and credit notes is given by repeating the structured message information (Strd information). The largest allowed number of invoice itemisations with one credit transfer is 999. The maximum length of an individual Strd occurrence is 280 characters. The xml tags are also included in the number of characters. The bank rejects payments which have too long itemisation information. In addition to structured message information, a free-form message (Ustrd) must always also be placed in a payment including invoice itemisations.

The bank checks of the itemisation information only the length and the number of items. Several sets of Strd information are only transmitted to banks that receive them. The given Ustrd information is transmitted to other banks.

Additional information on ERI invoice itemisations is available from the description published by the Federation of Finnish Financial Services (FK) "Description of the SEPA Credit Transfer AOS2 for Finland", which is available at www.finanssiala.fi.

#### 3.1.2 SEPA recurring payments

Recurring SEPA payments are identified by the Category Purpose code value SALA given at batch level. Only the batch-level information is significant, and the information given at transaction level does not affect processing. In other regards, recurring payments do not differ as to their information content from other SEPA payments. The Category Purpose affects the processing of the payment only with SEPA payments. If the payment is processed as a domestic express payment, foreign payment or a SWIFT cheque, the SALA code has no significance.

The due date given in SEPA recurring payments (Requested Execution date) is the debit date of the payer's account. The due date must be a banking day, otherwise the batch is rejected. Credits paid to Aktia's accounts are recorded on the accounts on the banking day following the debit date. Payments paid to other banks are transmitted to other banks on the next banking day.

The balance check of SEPA recurring payments and debit recordings are performed as for SEPA payments. Recurring SEPA payments are not, however, reported with a payment list, and they are not itemised on the account statement.

The reason for a recurring payment may be given in the Purpose field of the CreditTransfer part. Only the codes according to the ISO standard are allowed. Finnish banks show on the account statement of the payee the explanations corresponding to the codes listed below.

SALA = salary

PENS = pension

STDY = student benefit

- BECH = child benefit
- BENE = benefit
- SSBE = compensation
- AGRT = agricultural payment
- TAXS = tax refund

#### SEPA payments and recurring SEPA payments

Index	Element	Mandatory	Num	Example content	Explanation
			ber		
	Document		11		Message root element
	Pain.001.001.03		11		Payment message
1.0	GrpHdr		11		Group Header
1.1	/Msgld		11	20160102-0000001	Payment message identifier which must be unique for at least three months.The identifier is used as one criterion for batch-specific duplicate checks.
1.2	/CreDtTm		11	2016-01- 02T09:00:00+02:00	The time stamp of the payment message given by the payer (date and time)

1.6	/NbOfTxs	11	10	Mandatory, number of CdtTrfTxInf transactions in- cluded in the message, provided by the payer. The bank checks the information and if the number indicated does not correspond to the actual number, the whole message is rejected.
1.7	/CtrlSum	01	20000	The arithmetic sum of the amounts of money included in the CdtTrfTxInf transact- tions contained in the mes- sage (InstdAmt or EqvtAmt). Currencies have no effect. The bank does not check the information given.
1.8	/InitgPty	11		Details of the party generating the message. Not transmitted to the payee or to the account statement.
1.8	//Nm	11		Name of the party who generated the message
1.8	//PstlAdr/Ctry	01		Country code of the address of the party generating the message. The country code must be an ISO3166 code compliant with Alpha-2.
1.8	//PstlAdr/AdrLine[1-2]	02		The address of the party who generated the message.
2.0	PmtInf	1n		Each message must con- tain at least one PmtInf component, or payment batch. The PmtInf level provides common infor- mation on the payments included in the payment batch and related to the payment.
2.1	/PmtInfld	11		Payment batch ID. The ID must be unique for at least 3 months.
2.2	/PmtMtd	11	TRF	Mandatory. TRF must be used for payments.
2.6	/PmtTpInf	01		
2.7	//InstrPrty	01		Not mandatory. For SEPA payments, the value NORM must be used for normal payment orders, or TYHJÄ (empty).
2.8	//SvcLvl	01		
2.9	///Cd	11		SEPA payments use the value SEPA.
2.14	//CtgyPurp	01		

			1	I	
2.15	///Cd		11		Only used with recurring SEPA payments. The SEPA payment batches with SALA code are debited from the payer's account on the due date, and credited to the payee's on the banking day
2.17	/ReqdExctnDt		01	2016-10-25	following the due date Mandatory due date of payment batch. The due date may not be more than 120 days in the future. Dates no more than 2 days in the past will be treated as the current date. If the due date given is not a banking day, the payments will be processed on the next banking day. NOTE: The due date of recurring SEPA payments with SALA code must be a banking day, otherwise the batch is rejected.
0.40			1 1		
2.19	/Dbtr		11		Payer's details
2.19	//Nm		01		The payer's name as indicated by the payer. The name of the holder of the debit account is transmitted as the payer's name from the bank's system.
2.19	//PstlAdr/Ctry		01		The country code of the payer's address. The country code must be an ISO3166 code in accordance with Alpha-2.
	//PstlAdr/AdrLine[1-2]		02		The payer's address. If the address was not provided in the material, the address of the debit account's holder will be transmitted in the payment from the bank's register.

### 3.2 Domestic express payment

Domestic express payments may be paid to Finnish banks, which are included in the POPS system:

Aktia	HELSFIHH
Savings Banks	ITELFIHH
POP-Banks	POPFFI22
Danske Bank	DABAFIHH
DnB NOR	DNBAFIHX
Handelsbanken	HANDFIHH
Nordea	NDEAFIHH
OP	OKOYFIHH
Danske Bank	DABAFIHH
SEB	ESSEFIHX
S-Bank	SBANFIHH
Ålandsbanken	AABAFI22

The payment type of express payments is specified at batch level, whereby all the payments of the batch are processed as express payments. Express payments are identified by the <InstrPrty> element value HIGH given at batch level. The value is significant only at batch level. When given at transaction level, the aforementioned value is not taken into account. It is recommended that express payment material is sent as separate material, using the application ID XF. It is also possible to send the material using the application ID XF. It is recommended to send domestic express payments as their own material, which does not include other payment types. Material that includes even one express payment batch is rejected in its entirety in the channel check, if the last reception time (cut-off) of domestic express payments has been passed.

Cut-off times can be found on Aktia's website at http://www.aktia.fi/fi/yritysasiakkaat/maksujen-katkoajat.

Express payments may only be sent on banking days. Express payment materials sent on non-banking days are rejected in the channel check. The due date of an express payment batch must be the current day. A due date in the future is not allowed, but the batch is rejected in the reception check. Express payments are processed according to the normal payment schedule, and transmitted afterwards as soon as possible to the payee's bank. Payments sent as express payments where the payee's account is with Aktia, are processed as SEPA payments and recorded on the payee's account immediately, when the payment processing has completed.

#### **Domestic express payment**

Index	Element	Mandatory	Num ber	Example content	Explanation
	Document		11		Message root element
	Pain.001.001.03		11		Payment message
1.0	GrpHdr		11		Group Header
1.1	/Msgld		11	20160102-0000001	Payment message identifier which must be unique for at least three months. The identifier is used as one criterion for batch- specific duplicate checks.
1.2	/CreDtTm		11	2016-01- 02T09:00:00+02:00	The time stamp of the payment message given by the payer (date and time)
1.6	/NbOfTxs		11	10	Mandatory, number of CdtTrfTxInf transactions included in the message, provided by the

1.7	/CtrlSum	01	20000	payer. The bank checks the information and if the number indicated does not correspond to the actual number, the whole message is rejected.The arithmetic sum of the amounts of money included in the CdtTrfTxInf transactions con- tained in the message (InstdAmt or EqvtAmt). Currencies have no effect. The bank does not check
1.8	/InitgPty	11		the information provided. Details of the party generating the message. Not forwarded to the payee or to the account statement.
1.8 1.8	//Nm //PstlAdr/Ctry	01		Name of the party-who generated the message         Country code of the address of the party generating the
1.8	//PstlAdr/AdrLine[1-2]	02		message. The country code will be an ISO3166 code in accordance with Alpha2. The address of the party who
2.0	Pmtinf	1n		The address of the party whogenerated the message.Each message must contain atleast one PmtInf component.The PmtInf level providescommon information on thepayments included in thepayment batch and the debitand related to the payment.
2.1	/PmtInfld	11		Payment batch ID. The ID must be unique for at least 3 months.
2.2	/PmtMtd	11		Mandatory. TRF must be used for payments.
2.6 2.7	/PmtTpInf //InstrPrty	01	HIGH	For domestic express payments,
				the value of HIGH must be given. This information shall be provided at batch level and shall apply to all payments of the batch. When given at transaction level, the information is not taken into account.
2.8	//SvcLvl	01		
2.9	///Cd	11		Not mandatory. The value given does not affect the processing of domestic express payments.
2.14	//CtgyPurp	01		
2.15	///Cd	11		Not used for domestic express payments. The SALA-coded domestic express payment batches are processed as normal express payments.
2.17	/ReqdExctnDt	01		Mandatory due date of payment batch. Express payments can on- ly be sent on banking days. The due date of express payments must be the current banking day,

					otherwise the entire material will
					be rejected
2.19	/Dbtr		11		Payer's details
2.19	//Nm		01		The payer's name as indicated by the payer. The name of the account holder of the debit ac- count from the bank's system is transmitted in the payments as
2.19	//PstlAdr/Ctry		01		the payer's name. The country code of the payer's address. The country code shall be an ISO3166 code in accordance with Alpha-2. Not transmitted to the payee or saved on the account statement.

With domestic express payments, for- warding of the reference number as a reference cannot be guaranteed.

# 3.3 Foreign payments

All payments are transmitted as foreign payments, the currency of which is other than EUR. As foreign payments are also transmitted euro-denominated payments to other than SEPA banks, and payments whose credit account is an account in Aktia, whose account currency is other than EUR. The currency of the debit account does not affect the determination of the payment type.

The currencies allowed for payments are listed on Aktia's website at <a href="http://www.aktia.fi/fi/yritysasiakkaat/maksuliikenne/maksut/lahtevat-maksut">http://www.aktia.fi/fi/yritysasiakkaat/maksuliikenne/maksut/lahtevat-maksut</a>.

# 3.4 Foreign express payments

Foreign express payments are identified from the Service Level value URGP given at batch level. Only the information given at batch level is taken into account. If the information is only given at transaction level, it is not taken into account, and the payment is processed as a normal payment order in accordance with the description given in section 3.3. If the payment is interpreted as a foreign express payment on the basis of the information given at batch level, euro-denominated payments to SEPA banks are also transmitted as foreign express payments. Express payments are transmitted from Aktia to the recipient bank or the recipient bank's correspondent bank one banking day quicker than the corresponding foreign payment. Payment as a foreign express payment does not obligate the payee's bank to process the payment faster than normal.

Index	Element	Mandatory	Num ber	Example content	Explanation
	Document		11		Message root element

#### Foreign payments and foreign express payments

1.1	/Msgld	11	20160102-0000001	Payment message identifier which
1.1	magia	11	20100102-0000001	must be unique for at least three
				months. The identifier is used as
				one criterion in batch-specific
				duplicate checking.
1.2	/CreDtTm	11	2016-01-	Time stamp of the payment
			02T09:00:00+02:00	message given by the payer (date
				and time)
1.6	/NbOfTxs	11	1	Mandatory, number of CdtTrfTxInf
				transactions included in the
				message, provided by the payer.
				The bank checks the information,
				and if the amount reported does not
				correspond to the actual amount,
				the whole message is rejected.
1.7	/CtrlSum	01	2500	The arithmetic sum of the amounts
				of money included in the
				CdtTrfTxInf transactions contained
				in the message (InstdAmt or
				EqvtAmt). Currencies have no
				effect. The bank does not check the
				information provided.
1.8	/InitgPty	11		Details of the party generating the
				message. Not transmitted to the
				payee or on the account statement.
1.8	//Nm	11		Name of the party who generated
				the message
1.8	//PstlAdr/Ctry	01		Country code of the address of the
				party generating the message. The
				country code shall be an ISO3166
				code in accordance with Alpha-2.
1.8	//PstlAdr/AdrLine[1-2]	02		Address of the party who generated
				the message.
2.0	PmtInf	1n		Each message must contain at
				least one PmtInf component, or
				payment batch. The PmtInf level provides common information
				on the payments included in the
				batch; and the information
				related to the charge.
2.1	/PmtInfld	11		Payment batch ID. The ID must be
2.1	/i intinita			unique for at least 3 months.
2.2	/PmtMtd	11		Mandatory. TRF must be used for
				payments.
2.6	/PmtTpInf	01		
2.7	//InstrPrty	01		Not mandatory. With foreign
				payments, norm – normal payment
				order or TYHJÄ (empty).
2.8	//SvcLvl	01		
2.10	///Prtry	11		Only used for international
				express orders. The value URGP
				directs processing the payments
				of the batch as foreign express
				orders. Other values are not taken
				into account.
2.14	//CtgyPurp	01		Not used for foreign payments
2.17	/ReqdExctnDt	01		Mandatory due date of the payment
				batch. The due date may not be
				more than 120 days in the future.
		•		•

					Dates no more than 2 days in the
					past will be treated as the date of
					the current day. If the due date
					given is not a banking day, the
					payments are processed on the
0.40					next banking day.
2.19	/Dbtr		11		Payer's details
2.19	//Nm		01		The payer's name as indicated by
					the payer. The name of the holder
					of the debit account is transmitted
					as the payer's name from the
2.19	//PstlAdr/Ctry		01		bank's system.
2.19	//FSIIAdi/City		01		The country code of the payer's
					address. The country code shall be an ISO3166 code in accordance
					with Alpha-2.
2.19	//PstlAdr/AdrLine[1-2]		02		The payer's address.
2.19			02		Payer ID
2.19			11		-
	////Orgld		-		Company ID.
2.19	////Othr/Id		01		Service ID of the Outgoing
					Payment Agreement. The service ID must be given in the first Id
					instance. Based on the service ID,
		х			the bank identifies which
					customer's material is concerned
					and makes the contractual
					adjustments. The information is not
					transmitted to the payee.
2.19	/////SchmeNm/Cd		01		Scheme Name "BANK" is
		х			mandatory information in
					connection with the service ID.
2.20	/DbtrAcct		11		Debit account
2.20	///Id				
2.20	////IBAN		01		Number of the debit account. The
					debit account must always be
					given in IBAN format

# 3.5 SWIFT cheques

Payments are always processed as SWIFT cheques, if CHK has been given as the value of the PmtMtd element at batch level. A currency cheque is not possible, and the information given in the ChqTp element is not taken into account. The processing of SWIFT cheques corresponds to foreign payments, but the payee's account number or details of the payee's bank are not given with the payment. Aktia transmits the assignment to a correspondent bank, which manages the printing and posting of the cheque.

# 3.6 Outgoing payment orders (Requests for Transfer)

A payment batch is processed as outgoing payment orders, if the payer's bank's BIC is other than Aktia's BIC. Sending of outgoing payment orders is only allowed, if they have been separately defined to be allowed by agreement. The sending permission is sender-specific. Outgoing payment orders are processed and transmitted to the account bank specified in the order through the SWIFT network as MT101 messages, regardless of the due date as soon as possible after the material has been processed in payment processing. Aktia is responsible for processing the material and for the transmission of successfully processed orders as MT101 messages. Aktia is not responsible for processing the order in the account bank or for the execution of a payment transaction in accordance with the order.

The customer receives bank-specific instructions related to the content of orders from the account bank. Before sending orders, the customer must check from Aktia that Aktia and the account bank have a valid mutual agreement on the transmission of MT101 messages.

Index	Element	Mandatory	Num ber	Example content	Explanation

# 4 Pain.002 feedback messages

Feedback related to payments made with Pain.001.001.02 messages are in accordance with the schema pain.002.001.02. The feedback is formed for the sender of the material. The bank sets the feedback material for the retrieval of the customer in the channel from where the original payment material was sent. The feedback material contains references to the original payment material and in some cases to the individual payments contained by it. Not all information in the original message is returned. Feedback is provided of any incorrect batches and/or transactions after each processing.

# 4.1 Channel feedback

In the channel check, the material is either accepted in its entirety for continued processing, or rejected entirely.

With the pain.002 feedback of the channel, both the error code and the plain-language rejection reason are indicated in text format in element OrgnlGrpInfAndSts/StsRsnInf/StsRsn/Prtry. The explanation is given in English. If the material is accepted for continued processing, the text OK is returned as the information content of the element. The feedback of the channel is always formed, except for situations where the actual material cannot be processed at all due to a structural error or other technical error. In these cases, the information on rejection is only given by an error message given in connection with sending. In the Web Services channel, the error is given by an ApplicationResponse reply, and in the materials transfer of the Aktia Bank plc • Arkadiankatu 4-6 • 00100 Helsinki Tel. +358 10 247 6700 • Business ID 2181702-8 • www.aktia.fi

Corporate netbank by an error message shown in the user interface.

# 4.2 Reception feedback

In the reception checks, the content of the material is checked at a more detailed level. The correctness of each batch of the material and the information of an individual payment is examined. Each batch and payment is either accepted or rejected. The reception check result is reported by the reception pain.002 feedback. Feedback is formed always, and only once per one material. The Group Status of the feedback indicates a summary of the end result of the check made on the material. If the Group Status is ACCP, all the batches and payments in the material have been accepted and transferred to wait for payment. If the Group Status is RJCT, the material is rejected in its entirety and is not processed further. If the Group Status is PART, part of the payments and/or batches in the material are accepted and part of them are rejected. Of the rejected batches and/or payments are reported the ID information concerning the batch is given and the rejection reason. If the payment is rejected due to an error related to an individual payment, the feedback provides the ID information of the rejected payment, the rejected payment is rejected payment/payments and the reason for rejection.

# 4.3 Payment feedback.

Payment feedback is only formed if all transactions could not be successfully charged. The feedback reports the transactions that were included in the same material and processed in the payment processing that the feedback concerns. The transactions that have already been completely processed (paid or rejected) in previous processes are not taken into account in the feedback, other than in the number of items at the Group Header level. The transactions waiting for the payment date are also not taken into account otherwise than in the Group Header number of items information. The Group Status of payment feedback only refers to the overall situation of the transactions processed in the payment processing in question. Rejected batches and transactions are reported with the status code RJCT. The transactions that could not be charged, but whose processing is continued, are reported with the status code PDNG. Transactions with the PDNG status are reported with feedback after each payment processing, until the transaction is processed to completion, i.e. either successfully charged or rejected. For one material 0..n payment feedback is formed, depending on for how many due dates there are batches in the material, and what is the result of each payment processing.

# **4.3.1 Structure and content of the feedback message** The feedback message consists of three parts:

- 1) GroupHeader (A part) Occurs in the feedback message only once and contains the ID information of the message.
- 2) OriginalGroupInformationAndStatus (B part). Occurs in the feedback message only once. Includes references to the original message and any message-level feedback codes/texts.
- 3) TransactionInformationAndStatus (C part). May occur in the message several times. Includes references to the original (incorrect) batches and/or individual payment transactions.

## 4.3.2 Rejection reasons

#### **Channel feedback**

Error explanation returned with Pain.002	Error description
AM19 Transaction count mismatch	The number of transactions indicated in the Pain.001 element GrpHdr/NbOfTxs does not correspond to the actual number of transactions in the material
MD01 Missing/invalid service code	There is no batch in the material that has a valid service ID (OrgId/Othr/Id). Service ID missing entirely, is incorrect, the agreement has been terminated, or the sender does not have permission to send the material of the agreement in question.

DT01 Requested dates are invalid	The due date (ReqExctnDt) is in the past or over 120 days in the future. The whole material is rejected in reception, if even one batch has a non-permitted due date.
FF01 Message not valid	The material is not in accordance with the schema
TM01 POPS cut off time passed	The material contains a domestic express payment batch/batches, and it is attempted to send the material outside the allowed sending times.
AM18 Too many txns in PmtInf	The material has a batch/batches, where the number of transactions exceeds the maximum allowed (10,000).
CH16 Incorrect file format	The form of the material does not correspond to the application ID. The material is not valid XML or is not pain.001 payment material.
FF10 Technical error	Technical error

### Reception feedback and payment feedback

Error code	Error explanation	
AC01	The debit account is incorrect	
AC01	The debit account must be given in IBAN format	
AC01	The payee's account number is missing	The payee's account number is mandatory for all payments except for SWIFT cheques.
AC01	The payee's account number is incorrect	
AC01	The payee's account is not permitted	
AC01	The IBAN account number is mandatory	The IBAN account number, regardless of currency, is mandatory for all payments to all SEPA countries and other countries where the IBAN format is mandatory. A list of countries where the IBAN format is mandatory is available on Aktia's website.
AC04	The payee's account is incorrect	
AC04	The debit account is terminated	
AC06	The debit account has a restriction preventing its use	
AG01	No valid service agreement	No valid Outgoing Payments Agreement can be found using the service ID given in the payment batch details.
AM01	The monetary amount of the payment is zero	
AM02	The monetary amount of the payment is incorrect	
AM03	The currency code of the payment is incorrect	
AM03	Non-permitted currency	The currency given for the payment is not in use at Aktia. A list of allowed currencies can be found on Aktia's website.

AM03	The currency of a domestic express payment must be EUR	If the payment batch has been defined as domestic express
		payments (POPS), all payments included in it must be euro- denominated.
AM04	Balance is missing	Used in connection with transactions with PDNG status. Charging of the transaction is retried.
AM04	Rejected as uncovered	The transaction or batch was rejected, and no attempt will be made to charge it.
AM05	The payment batch is a duplicate	The item has been interpreted as a duplicate on the basis of a duplicate check described in Section 2.1.2.1.
DT01	The due date is too old	The due date may not be more than 2 days in the past, in which case the due date is processed as the current date. A due date older than this is not allowed.
DT01	The due date is too far in the future	The due date must not be more than 120 days in the future.
DT01	The due date of the salary material is not a banking day	For payment batches with Category Purpose code SALA given in the information, the due date or debit date of the payer's account must be a banking day.
DT01	The due date of a domestic express payment must be the current day	A due date in future will not be allowed for batches defined as domestic express payments.
ED01	The domestic express payment is not possible to the payee's bank	Domestic express payments can only be sent to banks listed in Section 3.2.
MD01	The sender is not allowed	The sender of the material has not been defined as an authorised sender in the Outgoing Payments agreement associated with the service ID.
MD01	The agreement has no permission for foreign assignments	In use with batches interpreted as RfT messages. The batch is interpreted as RfT, if DbtrAgt/BIC is other than HELSFIHH. The batch is rejected if sending foreign orders has not been defined as allowed in the Outgoing Payments agreement.
MD01	The debit account is not on the agreement	The debit account given in the batch details has not been defined as an allowed debit account in the Outgoing Payments agreement associated with the service ID.
NARR	The number of transactions does not match	
NARR	The service ID is missing	
NARR	The service ID is incorrect	The service ID given in the payment batch details does not correspond to the service ID defined in the Outgoing Payments agreement.
NARR	An incorrect Payment Method	
NARR	Decimals are not allowed in the currency of the payment	Applicable to payments in Japanese Yen (JPY)

NARR	Payment to the chosen country is not allowed	Payments to the country of the payee's bank are not allowed. In use also, if payments in the selected currency are not permitted to the beneficiary's bank's country.
NARR	The debit and the credit account are the same	
NARR	The payee's bank details are incomplete or the payee's IBAN is incorrect.	The payee's IBAN account number is incorrect, or the payment has not provided sufficient information about the payee's bank.
NARR	The recipient bank's country code is incorrect	The country code will be an ISO3166 code in accordance with Alpha-2.
NARR	The currency of the SWIFT cheque must be USD	
NARR	The payee's details are deficient or incorrect	The payee's name is mandatory for all payments. Address details of the payee must also be provided for foreign payments.
NARR	The payee's country code is incorrect	The country code shall be an ISO3166 code in accordance with Alpha-2.
NARR	The Purpose Code is incorrect	
NARR	Too much structured message	The transaction can give a maximum of 999 invoice itemisations or <strd> occurrences.</strd>
NARR	The structured message is too long	The maximum number of characters allowed for each invoice itemisation is 280, including XML tags.
NARR	The End to End Id contains characters forbidden in a foreign assignment	
NARR	Processing of the transaction failed	
NARR	The payment waits for processing	The payment requires manual processing at the bank. The payment will be debited from the account once manual processing has been performed. Does not require action by the customer.
NARR	Non-permitted expense code for the SEPA payment	For SEPA payments, the expense code must be SLEV. SHAR and TYHJÄ (empty) are processed as SLEV.
RC01	The payee's bank's BIC is incorrect	
RC01	The payer's bank's BIC is incorrect	
TM01	The cut-off time of domestic express payments is passed	In use only for domestic express payment batches.

## 5.2.3 Payment feedback

Two SEPA payment batches were sent in the material. One of the batches was debited successfully and the other has remained in balance circulation:

<?xml version="1.0" encoding="UTF-8"?> <Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.002.001.03" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="urn:iso:std:iso:20022:tech:xsd:pain.002.001.03 C:/AKTIA/pain.002.001.03.xsd"> <CstmrPmtStsRpt> <GrpHdr>

<Msgld>201607086054408201607086083121</Msgld> <CreDtTm>2016-07-08T16:53:51+02:00</CreDtTm> <DbtrAgt> <FinInstnId> <BIC>HELSFIHHXXX</BIC> </FinInstnId> </DbtrAgt> </GrpHdr> <OrgnlGrpInfAndSts> <OrgnlMsgId>8941577456-455542</OrgnlMsgId> <OrgnlMsgNmId>PAIN.001.001.03</OrgnlMsgNmId> <OrgnINbOfTxs>8</OrgnINbOfTxs> <GrpSts>PART</GrpSts> <NbOfTxsPerSts> <DtldNbOfTxs>3</DtldNbOfTxs> <DtldSts>ACSP</DtldSts> <DtldCtrlSum>600</DtldCtrlSum> </NbOfTxsPerSts> <NbOfTxsPerSts> <DtldNbOfTxs>5</DtldNbOfTxs> <DtldSts>PDNG</DtldSts> <DtldCtrlSum>2438.55</DtldCtrlSum> </NbOfTxsPerSts> </OrgnlGrpInfAndSts> <OrgnlPmtInfAndSts> <OrgnlPmtInfld>SEPA\_Batch\_002</OrgnlPmtInfld> <OrgnINbOfTxs>5</OrgnINbOfTxs> <OrgnlCtrlSum>2438.55</OrgnlCtrlSum> <PmtInfSts>PDNG</PmtInfSts> <StsRsnInf> <Rsn> <Cd>AM04</Cd> </Rsn> <AddtlInf>Kate missing</AddtlInf> </StsRsnInf> <TxInfAndSts> <TxSts>PDNG</TxSts> <OrgnITxRef> <Amt> <InstdAmt Ccy="EUR">2438.55</InstdAmt> </Amt> <RegdExctnDt>2016-07-08</RegdExctnDt> </OrgnITxRef> </TxInfAndSts> </OrgnlPmtInfAndSts> </CstmrPmtStsRpt>

</Document>

The uncovered batch in the previous example has remained finally uncovered and was rejected in the final payment of the day:

• The transactions included in the material which were already successfully charged in the previous payment, are taken into account only regarding the number of transactions (OrgnlGrpInfAndSts/OrgnINbOfTxs)
